## ABSTRACT

*This paper only tries to explain simulation which does occur or how this phenomenon might have recurred in the best scientific manner possible. It tries to explore the perception of our mind of such events.*

**Keywords:** Simulation

## INTRODUCTION

Very often in life one experiences a repetition of an event e.g. one remembers a fragrance one has smelled before or a situation one has faced before or sometimes one thinks that such and such event or thing one has dreamt of before or sometimes one even goes to the extent of claiming of occurrence of such event(s) in one's previous life or birth.

This paper does not try to explain how this is made possible or even to explain the simulation/repetition of such event(s) by powers that be in this case might be a very enlightened guru/sage or even some unknown powers or even God himself but it tries to explore the perception of our mind of such events.

Before we proceed further we would like to define an event as the occurrence of a sight, sound, smell, taste, touch or thought (or some combination thereof) we perceive in real-time real space. At discrete instances of time there is an event E recorded or registered in our mind/memory. Between two events there could be a time period and there could be events taking place during such a time period but they are either not recorded/registered in our minds due to either our perception of such events being trivial or simply they do not persist in our memory due to our disinclination towards them, only certain events get registered when we perceive an object of interest could be a sight, fragrance etc or combinations thereof.

## Simulation of events

When a set of events (E1, E2, E3.....En with time periods T12, T23, Tn-1n in between them) get registered in our mind/memory and when these same or more or less similar events get repeated in another time phase we experience simulation or reincarnation or whatever an individual prefers to brand this repetition of events. Please note this repetition of events is

not in our minds or dreams but an actual performance of real events. The closest analogy one can come up with is that of an audio/video recorder playing the same tune/shot after some time gap or in software one comes across regression testing where the same tests are repeated on the software (presuming that some changes are made to the software and one needs to re-validate the software by running the same previous tests and some new tests). The only difference between the analogies drawn and theme of this paper is that simulation/repetition of a set of events is taking place in real-time with real-life events which we perceive with our senses/mind/body and spirit with suitable time gaps or phases between the sets of events. This is not something we conceive of or imagine but this is actual facts recurring in life.

N.B. As the time periods  $T_1, T_2, \dots, T_{n-1}$  tends to zero the Discrete Events  $E_1, E_2, \dots, E_n$  tend to be continuous and more of real-time.

### **CONCLUSION**

The only conclusion that I have drawn from above discussion is that there is something like simulation which does occur, how or by whom or when I don't know. Those minds who are fortunate to have witnessed this or perceived this phenomenon will concur while to other intellects this might sound nonsensical or unbelievable or even absurd. This paper only tries to explain this phenomenon or how this phenomenon might have recurred in the best scientific manner possible.

### **Implications and potential applications**

1. Numerology, Astrology and Prediction studies in general.
2. Prevention of natural calamities' or man-made disasters or at the least damage control of such calamities'/disasters.
3. Prevention of accidents in life (in business has implications for Insurance companies)
4. Better management in life.
5. Security of life/property.

### **SUMMARY AND SCOPE FOR FURTHER RESEARCH**

It would be interesting to study the how, by whom or when such phenomenon occurs. If this is determined then above potential applications may become a reality.
